

Customer Survey: Water Service Line Material Identification

Due to the recent revisions by the EPA of the lead and copper rule, Junaluska Sanitary District (JSD) is required to perform an inventory of service line materials within our service area. JSD needs your help to gather information about the pipe material entering your home. This is your private service line from JSD's meter to your home or building.

If you are aware or know of the pipe material in the ground from the meter to the house, please complete the survey below and return to our office, or complete online at www.jsdwater.org/lead-service-line-inventory. One survey per household.

If you do not know or are unaware of the type of material installed, JSD crew will be required to expose your line within 18" outside of the meter box on the customer's property.

If you are NOT the property owner, please provide their contact information below.

Thank you,

Junaluska Sanitary District

(Please complete and return to JSD's office, email to info@jsdwater.org or mail to PO Box 35, Lake Junaluska, NC 28745.)
